

Email Security

AsystYOU Technology configures the proper policies and procedures to protect your businesses email communications against unauthorized access, loss or compromise.

An email message bounces between networks and servers, some that may be unsecured, on its journey. Even though an individual's computer may be secure, the network or server that the email traveled through may have been compromised. Securing your email is a basic building block of cybersecurity.

DAILY EMAIL STATS

- 320 BILLION messages
- 85% are SPAM
- 94% of MALWARE
- 70% from UNITED STATES

Benefits of Cybersecurity

01

Spam Filters Detect and Eliminate Threats

02

Multi-factor Authentication Secures Data

03

Safe and Secure Access from Anywhere
